

Project Ideas - To design TV lift using KINCONY RELAY Controller KC868-H4B

أفكار المشروع - لتصميم مصعد التلفزيون باستخدام KINCONY RELAY Controller KC868-H4B

Note : KC868-H4B can be integrated (Ethernet / WiFi) with Loxone using virtual outputs. The motor can be controlled (TV lift up/down) precisely using the "Automation Blinds " function block of Loxone config. Tu - is time in seconds required to fully lift to the max position. Td - is the time in seconds required to fully lower the TV. Any desired position of the lift is also possible through the function block.
